

Message from the management – founding year - 2008

Having completed our first year of activity, where practically everything has been done, including the set up of the head office and the formation of our team, I address myself with full respect, esteem and gratitude to all who directly or indirectly engaged themselves and supported this great venture.

In fact, if in January 2008 our financial condition was very fragile, the strong connections we had with a wide range of parties in this area, solid financial institutions, friends, colleagues and even competitors, led to the success of this project, which now already has a history to present.

The success of NBC Medical started the day we dreamt about this project and believed in it to the point of investing our future life in this activity.

The main strategic objective of NBC Medical was to attract the best staff, the best partners and the best health area projects. This would not have been possible without a great investment in relationships, partnerships and coordination of every party involved.

I can now assure that a very efficient formula has been defined, as we managed to attract an inspired team which has developed a very pragmatic attitude towards this business and developed a sustained strategy that emphasizes character, excellence in attitude and a spirit of mission in the business world.

I deeply thank you all. This way, we have a promising future ahead of us!

Nuno Belmar da Costa

General Manager

NBCMEDICAL
